

PocketDRS

Hawk-Eye LBW review from a single phone

POCKET DECISION REVIEW SYSTEM

1 PHONE • RS 0 EXTRA HARDWARE • 3-D TV-STYLE REPLAY

The delivery reviewed in 3-D, just like on TV.

The same ball on your phone video.

What is it?

In cricket, an umpire must judge whether a ball that hit the batter's leg would have gone on to hit the stumps (an LBW). On TV this needs costly **Hawk-Eye** cameras. **PocketDRS gives the same answer from just one phone**, as a clear, TV-style replay.

How it works

- 1 Mark the pitch & stumps
- 2 Find the ball
- 3 Rebuild in 3-D
- 4 Decide the verdict

Does it work?

Right every time. On balls with a known answer it was right **8 out of 8**, within about **12 cm** at the stumps. **But honest:** one phone cannot measure distance as well as many cameras, so speed is a rough guess and very close calls stay **umpire's call**. It is a cheap coaching aid, not a real umpire.
